Half Round - American Pattern

[American Pattern](#) Half Round Files

Details

HALF ROUND

Both sides double cut; the rounded sided is approximately one third of a circle and a flat on the other side. Can be supplied slightly tapered to the point or with parallel sides, both are within specifications. Used for filing concave surfaces, enlarging holes and making a corner radius. All meet or exceed the US Government specification GGG-F-325b.

HALF ROUND PIPELINER files come only in 14" length. The same Half Round file except both the rounded and flat sides are single cut. This file also has beefier edge teeth for cleaning welds primarily on pipe, hence the name given.
