

## Depressed Center Wheels

The depressed center design allows the flange/lock nut to recess within the wheel so that it can be used for various grinding and cutting applications. Depressed center wheels are designed to handle the most severe right angle grinding applications, from heavy stock removal to rough blending. Depressed center wheels may also be referred to as raised hub wheels or by their shape designation of "Type," with Type 27 being the most popular.

### 1/4" are designed for grinding:

- offhand stock removal of all types of metal and masonry
- smoothing welds
- pipe beveling

### 1/8" are designed to be used for both light grinding or cutting:

- offhand cut-off of all metal and masonry materials
- notching or cleaning pipes and weld beads

### .125" are designed to be used at a 90° angle for cutting only

### Professionals Want Choices

Norton NorZon Plus is the highest performance line in the industry. Invented and made in America, now improved and expanded.

### Performance on Fire

Engineered with a proprietary NorZon grain upgrade, the Norton BlueFire design offers faster removal rate, longer product life and increased productivity for better performance value.

### The Right Choice Every Time

The re-engineered Norton Gemini RightCut 100% aluminum oxide wheels provide thinner, faster cutting with a burr-free, precision cut and improved operator comfort.
